FINISH ➔ Hygienic

PROJECT

Performance flooring were appointed to carry out the installation of a new drainage run with associated thin section falls and polyurethane screed topping.

CHALLENGE

Performance had a tight timescale to ensure that the new drainage was installed and all materials cured in a short period of time to allow the rest of the fit out works to commence.

SOLUTION

The drains were backfilled using Emaco Tixo meaning that the floor falls could be installed only a few hours later.

Falls were formed in Ucrete FL, again, due to its fast curing nature, meant that it was at a sufficient strength the following day to receive Ucrete UD200 finishes.
